

10 - CODES

- 10.101 - IBC Building Types
- 10.110 - Fireblocking
- 10.120 - Seismic Design Categories

20 - STEEL FRAMING

- 20.100 - Non-Load Bearing Partitions: Bracing Options
- 20.101 - Attachment of Cold Formed Steel to Concrete Structures
- 20.110 - Limiting Interior Wall Height Tables
- 20.110 - Installing Resilient Channel

30 - GYPSUM BOARD

- 30.100 - Recommended Levels of Finish for Paper-Faced Gypsum Board
- 30.101 - Judging Interior Gypsum Board
- 30.102 - Environmental Conditions
- 30.103 - Application of Gypsum Board
- 30.104 - Moisture Damaged Gypsum Board
- 30.105 - Joint Ridging (Beading)
- 30.106 - Screw Pops/Nail Pops in Gypsum Board Assemblies
- 30.200 - Control Joint Placement in Gypsum Board Assemblies
- 30.300 - Gypsum Board Corner Bead
- 30.400 - Gypsum Board and Adhesive Tape (Masking Tape)

40 - CEILINGS

- 40.101 - Installing Acoustical Lay-in Type Ceiling in Seismic Regions
- 10.110 - Weights for Suspended Ceilings

50 - FIRE / SOUND

- 50.102 - Caulking and Sealant Information
- 50.501 - STC Ratings and Metal Framed Walls
- 50.530 - Protecting the Worker From Wildfire Smoke
- 50.550 - 1/8 Inch Vertical Gap Fire Test For Gypsum Board
- 50.551 - Missed Fastener Fire Test
- 50.552 - Trade Damage Fire Test

60 - EXTERIOR PLASTER

- 60.100 - Procedures for Judging Finished Portland Cement Plaster
- 60.101 - Cracks in Portland Cement Plaster
- 60.102 - Stucco Patching and Repair Methods for Portland Cement Plaster
- 60.103 - Plaster Cracking Along Metal Accessories
- 60.105 - Smooth Troweled Exterior Finishes
- 60.110 - Three-Coat Plaster/Stucco Added Performance Options
- 60.120 - Stucco vs. Acrylic Finish
- 60.121 - Acrylic Finishes
- 60.130 - One-Coat Stucco Systems
- 60.140 - Project Sequencing
- 60.150 - Accessing Wood-Based Sheathing
- 60.155 - Stress Relief Joints for Portland Cement Plaster
- 60.160 - Lath and Plaster Control Joints over Continuous lath
- 60.170 - Curing Intervals for Portland Cement Plaster
- 60.180 - Slump Cone Testing of Portland Cement Plaster Mixes
- 60.181 - Water Testing of Portland Cement Plaster/Stucco
- 60.185 - Field Mixes of Portland Cement Plaster
- 60.186 - Admixtures and Fibers Added to Portland Cement Plaster
- 60.190 - Calibration Boxes for Sand in Plaster Mixes
- 60.195 - Efflorescence
- 60.196 - Cleaning Efflorescence
- 60.200 - External Corner Reinforcement
- 60.210 - Portland Cement Plaster Applied to CMU or Cast-in Place Concrete
 - Cast-In Place Concrete
 - 60.215 - Water-Resistive Barriers Exposed to the Elements
 - 60.216 - Properties of Water-Resistive Barriers
 - 60.220 - Installing Two layers of Water-Resistive Barrier
 - 60.221 - 2021 IBC Drainage Plane Requirements over Wood-Based Sheathing
 - 60.250 - Portland Cement Plaster on Upward Facing Slopes
 - 60.281 - Exterior Stucco Soffits and Ceilings

- 60.300 - Foam Shapes
- 60.400 - Exterior Insulation Finish Systems (EIFS)

70 - INTERIOR PLASTER

- 70.101 - Gypsum Lath Behind Gypsum Plaster
- 70.112 - Gypsum Plaster over Concrete/Masonry Substrates
- 70.200 - Working Times for Gypsum Plaster
- 70.400 - Venetian Plaster

80 - MATERIAL HANDLING AND SAFETY

- 80.101 - Storage and Handling of Gypsum Board

90 - ENERGY CODES

- 90.100 - Fastening Requirements for Portland Cement Plaster over Continuous Insulation
- 90.500 - U Factor Assemblies – IECC
- 90.501 - California Climate Zones: Prescriptive U Factor Assemblies for Framed Construction
- 90.502 - Continuous Insulation using Rigid Foam Boards
- 90.503 - U Factor Assemblies – ASHRAE 90.1
- 90.520 - Air Barriers – IECC
- 90.521 - Air Barriers – California Building Code Requirements
