• A calibration box is used to establish how many No. 2 shovels are required to equal one cubic foot.

• The calibration box will measure 12 inches x 12 inches x 12 inches.

• Calibration should occur at the beginning of each day or after each new delivery of sand.

• The box is intended for calibration and not intended to fill box with sand and be picked up to deliver sand to mixer.

• Once the shovel count is established, the sand may be added to the mixer with a No. 2 shovel.

• Bagged sand can be added directly to mixer.

**SHOVEL AND CALIBRATION BOX**

**ADDING SAND WITH A SHOVEL IS ACCEPTABLE ONCE THE SHOVEL IS CALIBRATED**
